About this guide

The *Compatibility Charts* provide information about Symantec support for use of Enterprise Vault, Compliance Accelerator, and Discovery Accelerator.

Enterprise Vault and Microsoft products

Symantec is committed to ensuring that Enterprise Vault works effectively with the various products found in a typical Microsoft collaboration environment. We are committed to ensuring that Enterprise Vault adds value to the latest releases from Microsoft in the following product families:

- Exchange
- Office and Outlook
- Windows
- SQL Server
- SharePoint

To this end, we try to provide support for new releases from Microsoft in those areas within 90 days after the general availability of the releases from Microsoft. In some cases, support may take longer than this, but we try to meet this objective to provide our customers the best interoperability with Microsoft products.

Unless otherwise stated, we do not test Microsoft hotfixes.

Key

The values in the tables in this guide have the following meanings:

OR	Original Release.
OSR	OEM Service Release.
SP	Service Pack.
Y	Use of the combination of products is supported.
N	Use of the combination of products is not supported.
P	Pending. Use of the combination of products is not currently supported. Testing is planned, after which this value will change to Y or N.

Original releases and service packs

- Where a table shows (for example) “Enterprise Vault 7.0”, support is on all versions of Enterprise Vault 7.0 unless stated otherwise.
- For example, see the table in “[Windows clients](#)” on page 36. Outlook 2007 OR is supported as follows:
- By Enterprise Vault 6.0 SP4 or later service pack, as explained in footnote f.
 - By Enterprise Vault 7.0 SP1 or later, as explained in footnote g.
 - By all versions of Enterprise Vault 2007 and 8.0.

Enterprise Vault core dependencies

The core dependencies comprise:

- Enterprise Vault Server support for Enterprise Vault Add-Ins for email clients.
- Features and services that Enterprise Vault needs to function.

The dependencies listed are not the same as prerequisites, as not all features are needed in every installation of Enterprise Vault.

Note: In Enterprise Vault 2007, User Extensions were renamed Add-Ins.

Enterprise Vault Server support for Add-Ins (User Extensions)

The following table shows the supported combinations of Enterprise Vault Server and Enterprise Vault Add-Ins (User Extensions) for email clients.

Item	Version	Enterprise Vault Server			
		6.0	7.0	2007	8.0
Enterprise Vault Add-Ins (User Extensions)	6.0	Y	Y	Y	N
	7.0	Y	Y	Y	Y
	2007	Y	Y	Y	Y
	8.0	N	N	N	Y

OR = original release, SP = service pack, Y = supported, N = not supported, P = pending. See “Key” on page 8.

- a. If the system is under heavy load, contact Microsoft for the latest DCOM rollout fixes (ref: 295549).
- b. On a file server on which you are installing the FSA Agent/Placeholder service using the FSA Agent or Install Placeholder wizard in the Administration Console, the minimum requirement is SP4 + Update rollout package 1 for SP4.
- c. There may be some issues with Enterprise Vault 6.0; see technical note 276196 at <http://entsupport.symantec.com/docs/276196>.
- d. This version is a minimum requirement on a file server if you are installing the FSA Agent/Placeholder service using the FSA Agent or Install Placeholder wizard in the Administration Console. If you install the FSA Agent/Placeholder service by running the MSI Installer kit, then this version is not mandatory.
- e. Requires Enterprise Vault 6.0 SP4 with the hotfix described in technical note 288797 at <http://entsupport.symantec.com/docs/288797>, or later service pack.
- f. Requires Enterprise Vault 7.0 SP1 with the hotfix described in technical note 288800 at <http://entsupport.symantec.com/docs/288800>, or later.
- g. Applies to the Windows 32-bit on Windows 64-bit (WOW64) emulation. Enterprise Vault is supported on the WOW64 emulation. Enterprise Vault is not supported on Windows 2003 for Itanium-based systems.
- h. The Enterprise Vault Deployment Scanner does not install on a server running Windows Server 2003 x64 edition. The solution is to download and install the Deployment Scanner for Enterprise Vault 2007; see technical note 290077 at <http://entsupport.symantec.com/docs/290077>.
- i. The FSA Placeholder service is supported on Windows Server 2003 x64 edition.

OR = original release, SP = service pack, Y = supported, N = not supported, P = pending. See “Key” on page 8.

- j. Windows 2003 Server x64 edition using WOW64 SP2 does not allow ESM 2003 to be installed, but ESM 2003 can be installed using the previous service pack or base version.
- k. Requires Microsoft hotfix <http://support.microsoft.com/kb/949516>.

Microsoft SQL Server

Enterprise Vault					
Item	Version	6.0	7.0	2007	8.0
SQL Server 7.0	SP1, SP2, SP3, SP4	N	N	N	N

SQL Server 2005 Enterprise, Standard	OR, SP1	Y ^c	Y	Y	Y
	SP2	Y ^c	Y	Y	Y
	SP3	P	P	P	P
SQL Server 2005 x64 edition	OR, SP1	Y ^b	Y ^b	Y ^d	Y ^d
	SP2	Y ^b	Y ^b	Y ^d	Y ^d
	SP3	P	P	P	P
SQL Server 2008	OR	N	N	N	P ^e

- a. It is important to be aware of the performance and scalability limitations of SQL Server 2005 Express Edition. For details, see the SQL Server 2005 Features Comparison table, which is in the Features section of the SQL Server 2005 Product Information on the Microsoft Web site.
- b. Enterprise Vault Reporting is not supported.

OR = original release, SP = service pack, Y = supported, N = not supported, P = pending. See “Key” on page 8.

- c. Enterprise Vault 6.0 requires SP1 or later. For more information on support for SQL 2005, see technical note 281261 at <http://entsupport.symantec.com/docs/281261>.
- d. Enterprise Vault Reporting is supported, except for: Vault Store Usage Summary, Vault Store Usage by Archive, and Vault Store Usage by Billing Account.
- e. Support is planned for Enterprise Vault 8.0 SP1.

Microsoft Data Access Components (MDAC)

Item	Version	Enterprise Vault			
		6.0	7.0	2007	8.0
MDAC	2.1 SP2, 2.5, 2.5 SP1, 2.5 SP2, 2.5 SP3	N	N	N	N
	2.6, 2.6 SP1, 2.6 SP2, 2.7, 2.7 SP1, 2.8, 2.8 SP1, 2.8 SP2	Y	Y	Y	Y

Some confusion exists as to the exact versions of MDAC 2.1 or later. The versions are as follows:

Version	Also known as	Notes
MDAC 2.1	–	Packaged with Microsoft SQL Server 6.5 SP5a and 7.0.
MDAC 2.1 SP1	–	Only packaged with Internet Explorer 5 (version 2.1.1.3711.6) and SQL Server 7.0 SP1.
MDAC 2.1 SP1a	Generally Available release version 2.1.1.3711.11	
MDAC 2.1 SP2	Generally Available release version 2.1.2.4202.3	Contains the same MDAC version as SQL Server 7.0 SP2 and SP3.
MDAC 2.5	MDAC 2.5 RTM version 2.50.4403.12	Contains the same MDAC version as the first release of Windows 2000.
MDAC 2.5 SP1	Release version 2.51.5303.5	Contains the same MDAC version as Windows 2000 SP1.
MDAC 2.5 SP2	Release version 2.52.6019.2	

OR = original release, SP = service pack, Y = supported, N = not supported, P = pending. See “Key” on page 8.

Version	Also known as	Notes
MDAC 2.6	MDAC 2.6 RTM version 2.60.6526.3	Contains the same MDAC version as SQL Server 2000.
MDAC 2.6 SP1	Release version 2.61.7326.6	Contains the same MDAC version as SQL Server 2000 SP1 and Windows 2000 SP2.
MDAC 2.7	MDAC 2.7 RTM Refresh (2.70.9001.0)	Contains the same MDAC code as Windows XP, but with an updated version number.
MDAC 2.7 SP1	Release version 2.71.9040.2	Packaged with SQL Server 2000 SP3a.
MDAC 2.8	Release version 2.80.1022.3	Contains the same MDAC version as Windows Server 2003.
MDAC 2.8 SP1	Release version 2.81.1117.6	
MDAC 2.8 SP2	Release version 2.82.1830.0	

Due to issues with clustering, MDAC 2.6 SP1, MDAC 2.7, MDAC 2.7 SP1, MDAC 2.8, and MDAC 2.8 SP1 are currently *not* supported on SQL Server 6.5 or SQL Server 7.0 clustered servers.

.NET Framework

Item	Version	Enterprise Vault			
		6.0	7.0	2007	8.0
1.1	1.1.4322.573	Y ^a	Y	Y	Y
1.1 SP1	1.1.4322.2300	Y	Y	Y	Y
2.0	2.0.50727.42	Y	Y	Y	Y
2.0 SP1	—	Y	Y	Y	Y
3.0	—	N	N	N	N

a. Needed for File System Archiving only.

Microsoft Internet Information Server (IIS)

Item	Version	Enterprise Vault			
		6.0	7.0	2007	8.0
IIS	4.0	N	N	N	N
	5.0, 6.0	Y	Y	Y	Y
	7.0	N	N	N	Y ^a

- a. Enterprise Vault running on Windows Server 2008 requires the IIS 6 Management Console component. See the Enterprise Vault 8.0 *ReadMeFirst*, which is available from <http://entsupport.symantec.com/docs/298949>.

Microsoft Message Queuing (MSMQ)

Item	Version	Enterprise Vault			
		6.0	7.0	2007	8.0
MSMQ	1.0	N	N	N	N
	2.0, 3.0	Y	Y	Y	Y

Microsoft Internet Security and Acceleration (ISA) Server

Item	Version	Enterprise Vault			
		6.0	7.0	2007	8.0
ISA Server 2004	OR, SP1, SP2	Y ^{a, b}	Y ^b	Y ^b	Y ^b
	SP3	Y ^{a, b}	Y ^b	Y ^b	Y ^b
ISA Server 2006	All versions	N	N	Y	Y

- a. Requires Enterprise Vault 6.0 SP3 or later.
- b. If you are configuring access using OWA forms-based authentication, you should be aware of the issue described in Microsoft Knowledge Base article KB316431. The issue prevents OWA 2003 users from opening attachments to archived messages when using forms-based authentication. To fix the issue you need to install ISA Server 2004 Service Pack 2, and apply Microsoft hotfix KB924410.

Microsoft Outlook

When installing Outlook 2000, Outlook 2002, or Outlook 2003 on Enterprise Vault servers, you must be sure to install the Collaborative Data Object (CDO). By default, this component is not installed.

Enterprise Vault					
Item	Version	6.0	7.0	2007	8.0
Outlook 2000	9.0.0.2711, SR-1, SR-1a, SP2, SP3	Y ^a	N	N	N
Outlook 2002	10.2627.2625, SP1, SP2, SP3	N	N	N	N
Outlook 2003	11.5608.5606, SP1	Y	Y	Y	Y
	SP2	Y ^b	Y ^b	Y ^b	Y ^b
	SP3	Y ^c	Y ^c	Y ^c	Y ^c
Outlook 2007	OR, SP1	p ^d	p ^e	p ^f	p ^f

- a. Outlook 2000 supported with original 6.0 release. Outlook 2003 is mandatory on Enterprise Vault servers with Enterprise Vault 6.0 SP1 and later.
- b. See technical note 281568 at <http://entsupport.symantec.com/docs/281568>.
- c. An issue exists in Outlook 2003 SP3 and Outlook 2007 SP1, with items that have 2048 or more recipients in the TO, CC or BCC fields, or have more than 2048 attachments. If you are likely to be affected by this issue, it is addressed by a Microsoft hotfix for Outlook 2003 SP3. See <http://support.microsoft.com/kb/948073>. The recommended registry value is 0xFFFFFFFF.
- d. Outlook 2007 is not currently supported on Enterprise Vault servers. It is supported on users' desktop computers; it requires Enterprise Vault 6.0 SP4 or later service pack. For further essential information about support for Outlook 2007 on users' desktop computers, see the Enterprise Vault 6.0 SP4 *Updates* document, which is available from <http://entsupport.symantec.com/docs/287442> on the Symantec support Web site.
- e. Outlook 2007 is not currently supported on Enterprise Vault servers. It is supported on users' desktop computers; it requires Enterprise Vault 7.0 SP1 or later. For further essential information about support for Outlook 2007 on users' desktop computers, see the Enterprise Vault 7.0 SP1 *Updates* document.
- f. Outlook 2007 is not currently supported on Enterprise Vault servers. It is supported on users' desktop computers; it requires Enterprise Vault 2007 or later. For further essential information about support for Outlook 2007 on users' desktop computers, see the Enterprise Vault release notes.

Microsoft Management Console (MMC)

Item	Version	Enterprise Vault			
		6.0	7.0	2007	8.0
MMC	1.1	N	N	N	N
	1.2, 2.0	Y	Y	Y	Y
	3.0	Y ^a	Y ^b	Y	Y

a. Requires Enterprise Vault 6.0 SP4 with the hotfix described in technical note 288797 at <http://entsupport.symantec.com/docs/288797>, or later service pack.

b. Requires Enterprise Vault 7.0 SP1 with the hotfix described in technical note 288800 at <http://entsupport.symantec.com/docs/288800>, or later.

Web browsers

Item	Version	Enterprise Vault			
		6.0	7.0	2007	8.0
Internet Explorer	4.0, 5.0, 5.5, 5.5 SP1	N	N	N	N
	5.5 SP2	Y	Y	N	N
	6.0, 6.0 SP1, 6.0 SP2	Y	Y	Y	Y
	7.0	Y ^a	Y ^b	Y	Y
Mozilla Firefox	All versions	N	N	P	P

a. Requires Enterprise Vault 6.0 SP4 or later service pack.

For notes on support for Internet Explorer 7.0, see the Enterprise Vault 6.0 SP4 Updates document, which is available from <http://entsupport.symantec.com/docs/287442> on the Symantec support Web site.

b. Requires Enterprise Vault 7.0 SP1 or later.

For notes on support for Internet Explorer 7.0, see the Enterprise Vault 7.0 SP1 Updates document, which is available from <http://entsupport.symantec.com/docs/287443> on the Symantec support Web site.

Server virtualization

Item	Version	Enterprise Vault			
		6.0	7.0	2007	8.0
EMC VMware ESX	2.5	Y ^a	Y	Y	N
	3.0	Y	Y	Y	N
	3.5	P	P	Y	Y
Microsoft Virtual Server 2005	OR	Y ^b	Y ^b	Y ^b	P

- a. Requires Enterprise Vault 6.0 SP2 or later. See technical note 282100 at <http://entsupport.symantec.com/docs/282100>.
- b. See technical note 284897 at <http://entsupport.symantec.com/docs/284897>.

Clustering

Item	Version	Enterprise Vault			
		6.0	7.0	2007	8.0
Microsoft Server clustering	Windows Server 2003	N	Y ^a	Y ^a	Y ^a
	Windows Server 2003, x64 edition	N	N	Y ^a	Y ^a
VERITAS Cluster Server	VCS 4.3 MP1	Y ^{a, b}	Y ^{a, b}	Y ^{a, b}	P
	VCS 5.0	Y ^a	Y ^a	Y ^a	Y ^a
	VCS 5.0, x64 edition	N	N	N	Y ^a
	VCS 5.1	N	N	Y ^a	P

- a. Active/passive clusters, in which one or more active nodes can fail over to a passive node, are supported. Active/active clusters are not supported.
- b. Requires Enterprise Vault 6.0 SP2 or later, and VERITAS Storage Foundation HA for Windows 4.3 MP1 or later. For further configuration information, see technical notes 282080 at <http://entsupport.symantec.com/docs/282080> and 282333 at <http://entsupport.symantec.com/docs/282333>.

Index file defragmentation tools

Enterprise Vault creates standard Windows files via indexes and savesets. It has no known incompatibility with disk defragmentation software.

The items in the table below will be shown as P (Pending) until testing is complete.

Item	Version	Enterprise Vault			
		6.0	7.0	2007	8.0
Windows Defragmenter	—	P	P	P	P
Diskeeper 2007	—	P	P	P	P

OR = original release, SP = service pack, Y = supported, N = not supported, P = pending. See “Key” on page 8.

Storage devices, appliances, and software

This chapter details compatibility between Enterprise Vault and the storage products to which it can archive data.

Notes

- Where appropriate, the tables in this chapter indicate the specific third-party product version that was tested with Enterprise Vault. If there is a subsequent minor release that provides fixes without changing existing functionality, Symantec supports use of Enterprise Vault with that minor release unless stated otherwise.
- Symantec supports archiving from Enterprise Vault to any high-performing storage product running Windows NTFS that is accessed using the CIFS protocol and that operates in non-WORM/non-compliance mode.

- a. A standard NTFS file system mounted on fast access media (such as SAN, NAS, or DAS) is an acceptable platform for Enterprise Vault, offering speed, scalability, and security. Some vendors offer an NTFS front-end to other media (such as offline or WORM). Enterprise Vault should work with such systems, but care should be taken of their specific characteristics, such as slower access speeds. It is recommended that the index data is not placed on such alternate media, even though it is NTFS-based.
- b. The Enterprise Vault PST Locator task will not find PST files on a MultiStore (vFiler) system. The PST Locator task will find PST files on a NearStore system that is running ONTAPI 1.4 or above.
- c. Requires Enterprise Vault 6.0 SP2 or later.

EMC Centera SDK and CentraStar

The following table shows which version of the EMC Centera SDK is supplied with each Enterprise Vault version, and the CentraStar release against which Symantec's testing was performed.

Note: If you are planning to upgrade an existing Enterprise Vault installation, use the table to see which version of the SDK is supplied with the version of Enterprise Vault you are upgrading to. We recommend that you then check with EMC that the version of CentraStar you are using is supported by that SDK.

Enterprise Vault version	Centera SDK version (build number)	CentraStar version
6.0	2.4 (2.4.361.0)	2.3. <i>n</i>
6.0 SP1	3.0 (3.0.388.0)	2.4. <i>n</i>

2007 SP4, 8.0	3.2 (3.2.647.0)	3.1. <i>n</i> , 4.0. <i>n</i>

- Notes
- In the **CentraStar version** column, *n* represents any minor version number. For example, 3.0.*n* indicates that versions 3.0.1-827-626-11704 and 3.0.1-1048-665-12506 are supported.
 - The Storage on Access node feature in CentraStar 2.4 is available on Gen-3 and later Centeras only.
 - The M++ naming scheme in CentraStar 3.0 is supported.
 - For optimum performance, and to ensure adoption of EMC Centera best practices, Symantec recommends using the Centera in CPM mode. All Enterprise Vault performance and scalability testing is done in CPM mode, and Enterprise Vault is pre-configured for Centera with all best practice settings in place.

- c. Enterprise Vault must run on a 32-bit server, with 32-bit Veritas NetBackup client. Veritas NetBackup 6.5 x64 edition server can be run on a Windows 64-bit operating system.
- d. Requires Enterprise Vault 6.0 SP2 or later.

Exchange archiving

Exchange System Manager (ESM)

Microsoft Exchange System Manager (ESM) is a prerequisite on the Enterprise Vault server for Enterprise Vault 7.0 SP2 and earlier versions. See the following subsections for more information.

Note: You cannot use Exchange System Manager on an Enterprise Vault server to manage Exchange Server. The version of `mapis32.dll` used by Enterprise Vault is not compatible with that required by Exchange System Manager.

Enterprise Vault versions where ESM is not a prerequisite

From Enterprise Vault 7.0 SP3 onwards, it is possible to run an Exchange mailbox archiving task or Journaling task without installing ESM on the Enterprise Vault server.

The ability to synchronize inherited permissions from the Exchange server to users' archives requires ESM to be installed on the Enterprise Vault server. Note the following:

- If ESM is installed on an Enterprise Vault server running 32-bit Windows Server 2003, you can still synchronize inherited permissions from the Exchange server to users' archives.
- Windows Server 2003 x64 SP2 prevents Exchange Server 2003 ESM from installing, so you cannot synchronize inherited permissions if the Enterprise Vault server uses this operating system.

Enterprise Vault 7.0 SP3 and later versions of Enterprise Vault still include the ability to synchronize delegate permissions; that is, permissions set through Active Directory users and computers, or through Outlook folder permissions.

Enterprise Vault versions where ESM is a prerequisite

In Enterprise Vault 7.0 SP2 and earlier versions, Enterprise Vault servers with an Exchange mailbox archiving task or Journaling task must have the ESM tools and fixes shown in the table below.

Note: Exchange Management Console (the management tool with Exchange Server 2007) is currently not supported on any version of the Enterprise Vault server. To archive from Exchange Server 2007, install Exchange System Manager for Exchange Server 2003 on the Enterprise Vault server. Outlook 2003 is also still required on the Enterprise Vault server, even if all of your target Exchange servers are running Exchange Server 2007.

a. For multilingual Unicode support, a Microsoft hotfix is required for Exchange Server 2003 SP1 and SP2. See <http://entsupport.symantec.com/docs/279902> for details. Please note that technical note 279902 is under review for Enterprise Vault 7.0 or later.

b. Requires Enterprise Vault 6.0 SP1 or later.

OR = original release, SP = service pack, Y = supported, N = not supported, P = pending. See “Key” on page 8.

- c. Requires Enterprise Vault 6.0 SP4 or later. Deployment of the latest Enterprise Vault service pack is recommended.

Exchange System Manager 2003 and Outlook 2003 must be installed on the Enterprise Vault server that is archiving from Exchange Server 2007.

Exchange Server 2007 Outlook Web Access (OWA) is not supported.

For further essential information about support for Exchange Server 2007, including configuration and limitations, see the Enterprise Vault 6.0 SP4 *Updates* document, which is available from <http://entsupport.symantec.com/docs/287442>.

It is also essential to see <http://entsupport.symantec.com/docs/288215>, which describes a Symantec Software Alert concerning hotfixes for Enterprise Vault 6.0 SP4.

- d. Requires Enterprise Vault 7.0 SP1 or later. Deployment of the latest Enterprise Vault service pack is recommended.

Exchange System Manager 2003 and Outlook 2003 must be installed on the Enterprise Vault server that is archiving from Exchange Server 2007. From Enterprise Vault 2007 SP3, Exchange System Manager 2003 is no longer required on the Enterprise Vault server.

Exchange Server 2007 Outlook Web Access (OWA) is not supported.

For further essential information about support for Exchange Server 2007, including configuration and limitations, see the Enterprise Vault 7.0 SP1 *Updates* document, which is available from <http://entsupport.symantec.com/docs/287443>.

It is also essential to see <http://entsupport.symantec.com/docs/288215>, which describes a Symantec Software Alert concerning hotfixes for Enterprise Vault 7.0 SP1.

- e. Requires Enterprise Vault 2007 or later. Deployment of the latest Enterprise Vault service pack is recommended.

Outlook 2003 must be installed on the Enterprise Vault server that is archiving from Exchange Server 2007.

Exchange Server 2007 Outlook Web Access (OWA) is supported.

For further essential information about support for Exchange Server 2007, see the Enterprise Vault release notes.

- f. OWA on Exchange 2007 SP1 requires Enterprise Vault 2007 SP2 or later.

- g. Exchange 2007 is supported on Windows Server 2008 with Enterprise Vault 2007 SP3 or later. Enterprise Vault is not supported on Windows Server 2008.

Enterprise Vault 2007 running on Windows Server 2003 is not supported in environments that use Windows Server 2008 Active Directory. However, Enterprise Vault 2007 running on Windows Server 2003 is supported in a Windows Server 2008 domain that uses Windows Server 2003 Active Directory.

Exchange Server OWA control file versions

As Enterprise Vault OWA Extensions modify OWA control files on Exchange Server 2003, the version of these files must be one that is supported by Enterprise Vault.

The control file versions supported are shown in the table below.

Exchange Server 2003 hotfixes may modify OWA control files. If you have installed an Exchange Server 2003 hotfix that has created an unsupported version of the OWA control files folder, or modified any files in the control files folder, a “Save file error” will be reported when you attempt to install the Enterprise Vault OWA Extensions.

- a. If you use Outlook 2002, apply SP2 or both SP1 and hotfix [314982](#). This resolves a problem when trying to forward archived messages that have attachments. See the Administration Console help for more details.
- b. There is a problem with Outlook 2002 that prevents the contents of Enterprise Vault shortcuts from being displayed in the Outlook preview pane. A Microsoft hotfix addresses this problem for Outlook 2002, and it is already included in Outlook 2003. Once you have installed the hotfix for Outlook 2002, or you have installed Outlook 2003, there are several registry values to set on each client computer to make the preview pane work. There is a new setting in `DesktopSettings.txt` that makes the Enterprise Vault client automatically create the registry values that are needed. For more information, see the description of `FixOutlookPreviewPane` in the “Configuring Clients” section of the Administration Console help.
- c. The Outlook 2003 feature to connect to an Exchange Server account by using Remote Procedure Call (RPC) over HTTP is supported only if you are using Enterprise Vault User Extensions 6.0 SP3 and Enterprise Vault Server 6.0 SP3, or later.
- d. See technical note 281568 at <http://entsupport.symantec.com/docs/281568>.
- e. An issue exists in Outlook 2003 SP3 and Outlook 2007 SP1, with items that have 2048 or more recipients in the TO, CC or BCC fields, or have more than 2048 attachments. See technical note 296572 at <http://entsupport.symantec.com/docs/296572>. If you are likely to be affected by this issue, it is addressed by a Microsoft hotfix for Outlook 2003 SP3. See <http://support.microsoft.com/kb/948073>. The recommended registry value is 0xFFFFFFFF.

File System Archiving (FSA)

Note: In Enterprise Vault 2007, the term *FSA Agent* replaced the term *Placeholder service*. The FSA Agent is the Placeholder service plus support for File Blocking and FSA Reporting.

Content platforms

Support for FSA Agent/Placeholder service on Windows

Note: File System Archiving in Enterprise Vault 2007 or later does not support FAT32 file systems.

Enterprise Vault File System Archiving requires an FSA Agent/Placeholder service to be installed on the target file server to allow Windows placeholders to be created and accessed. The FSA Agent/Placeholder service is supported for use with the following Windows operating systems.

Item	Version	Enterprise Vault			
		6.0	7.0	2007	8.0

- a. If the system is under heavy load, contact Microsoft for the latest DCOM rollup fixes (ref: [295549](#)).
- b. On a file server on which you are installing the FSA Agent/Placeholder service using the Install FSA Agent or Install Placeholder wizard in the Administration Console, the minimum requirement is SP4 + Update rollup package 1 for SP4.
- c. There may be some issues with Enterprise Vault 6.0; see technical note 276196 at <http://entsupport.symantec.com/docs/276196>.
- d. This version is a minimum requirement on a file server if you are installing the FSA Agent/Placeholder service using the Install FSA Agent or Install Placeholder wizard in the Administration Console. If you install the FSA Agent/Placeholder service by running the MSI Installer kit, then this version is not mandatory.
- e. Requires Enterprise Vault 6.0 SP4 or later service pack.
- f. Requires Enterprise Vault 7.0 SP1 or later.
- g. The Enterprise Vault FSA Reporting Web service is not supported on Windows Server 2003 x64 edition.
- h. Requires Enterprise Vault 2007 SP3 or later.
- i. Enterprise Vault FSA is supported in clustered Windows Server 2008 environments from Enterprise Vault 2007 SP4.

Support for placeholders on EMC Celerra

Enterprise Vault supports the creation and access of placeholders on EMC Celerra devices running the following operating system.

Enterprise Vault					
Item	Version	6.0	7.0	2007	8.0
DART	5.5	N	Y	Y	Y
	5.6.38	N	N	Y ^a	Y
	5.6.4.2	N	N	P	P

OR = original release, SP = service pack, Y = supported, N = not supported, P = pending. See “Key” on page 8.

a. Requires Enterprise Vault 2007 SP4 or later.

Support for Network Appliance Data ONTAP

Enterprise Vault File System Archiving is supported to archive from Network Appliance Data ONTAP as shown in the following table.

For more information on supported configurations of Enterprise Vault and Network Appliance MultiStore devices, see technical note 286526 at <http://entsupport.symantec.com/docs/286526>.

Note: The major and minor releases of Data ONTAP are supported, in accordance with Network Appliance’s recommendations. In the following table, *n* represents any minor version number.

Item	Version	Enterprise Vault			
		6.0	7.0	2007	8.0
Data ONTAP	7.0. <i>n</i> , 7.1. <i>n</i>	Y	Y	Y	N
	7.2. <i>n</i>	Y	Y	Y	Y
	7.3. <i>n</i>	N	P	P	P
MultiStore (vFiler) running Data ONTAP	Data ONTAP 7.0. <i>n</i> , 7.1. <i>n</i>	Y ^a	Y ^a	Y ^a	N
	Data ONTAP 7.2. <i>n</i>	Y	Y	Y	Y
	Data ONTAP 7.3. <i>n</i>	N	P	P	P

a. A limitation with versions of Network Appliance Data ONTAP earlier than Data ONTAP 7.2 prevents Enterprise Vault from working correctly with Network Appliance MultiStore (vFiler) systems. Enterprise Vault is unable to create an fpolicy on the filer automatically, and an error message appears in the event log on the Enterprise Vault server.

For details of how to create an fpolicy for Enterprise Vault to use, see technical note 280369 at <http://entsupport.symantec.com/docs/280369>.

Support for IBM N series

Enterprise Vault File System Archiving is supported to archive from IBM N series enterprise storage as shown in the following table.

Item	Version	Enterprise Vault			
		6.0	7.0	2007	8.0
IBM N series running Data ONTAP	Data ONTAP 7.1. <i>n</i>	N	N	Y	N
	7.2. <i>n</i>	N	N	Y	Y
	7.3. <i>n</i>	N	N	P	P
MultiStore (vFiler) running Data ONTAP	Data ONTAP 7.1. <i>n</i>	N	N	Y ^a	N
	Data ONTAP 7.2. <i>n</i>	N	N	Y	Y
	Data ONTAP 7.3. <i>n</i>	N	N	P	P

- a. A limitation with versions of Data ONTAP earlier than Data ONTAP 7.2 prevents Enterprise Vault from working correctly with MultiStore (vFiler) systems. Enterprise Vault is unable to create an fpolicy on the filer automatically, and an error message appears in the event log on the Enterprise Vault server.

For details of how to create an fpolicy for Enterprise Vault to use, see technical note 280369 at <http://entsupport.symantec.com/docs/280369>.

Unsupported content platforms

For reference, Enterprise Vault File System Archiving does not support the following content platforms.

Supported Windows components

Enterprise Vault File System Archiving placeholder and file internet shortcuts have been tested with the following Windows components. If a Windows component does not appear on this list, it is advisable to perform a proof of concept validation of a production system prior to installation.

Note: Where applicable, the support shown is based on the Enterprise Vault FSA Agent/Placeholder service and application hosted on the same file server.

All the components described in this section are 32-bit, unless 64-bit is explicitly stated.

- a. See the Enterprise Vault 8.0 *ReadMeFirst*, which is available from <http://entsupport.symantec.com/docs/298949>.
- b. A single mount point created as an Enterprise Vault volume and all its subfolders are supported. The subfolders can also be archiving targets. Neither nested mount points, nor volume targets added above the mount point are supported.
- c. A single junction point created as an Enterprise Vault volume and all its subfolders are supported. The subfolders can also be archiving targets. Nested junction points are not supported.
- d. Enterprise Vault will retain Alternate Data Streams on Placeholders.
- e. On Windows 2003 SP1, users with a Windows Quota are able to archive, recall, and restore items even after the quota limit is reached. On Windows 2003 SP2 Storage Server R2, the Windows FSRM Quota limits work as expected.
- f. An archived file that was originally compressed with Windows compression will be recalled uncompressed when accessed through FSA. The recalled file cannot be re-compressed with Windows compression due to a Microsoft limitation.
- g. Placeholder access is supported. Both folder location tracking and archiving from a DFS Namespace are not supported. For more information, see technical note 282891 at <http://entsupport.symantec.com/docs/282891>.

Cluster support for FSA services

The following table shows the cluster server software that can be used to provide high availability of the Enterprise Vault FSA services.

In Enterprise Vault 7.0 onwards, support for the cluster server software shown in the table is built in to Enterprise Vault. In Enterprise Vault 6.0 SP2 and later service packs, a manual configuration procedure is required.

Item	Version	Enterprise Vault			
		6.0	7.0	2007	8.0

a. Requires Enterprise Vault 6.0 SP2 or later service pack. For more information, see the following technical notes: <http://entsupport.symantec.com/docs/283283> and <http://entsupport.symantec.com/docs/283303>.

b. For Enterprise Vault FSA, VCS 4.3 MP1 is also the base version for VCS x64 support.

c. Requires Enterprise Vault 6.0 SP2 or later service pack. For more information, see the following technical notes: <http://entsupport.symantec.com/docs/283197> and <http://entsupport.symantec.com/docs/283258>.

Supported applications

Enterprise Vault File System Archiving placeholder and file internet shortcuts have been tested with the following applications. If a third-party application does not appear on this list, it is advisable to perform a proof of concept validation of a production system prior to installation.

Notes

- Where applicable, the support shown is based on the Enterprise Vault FSA Agent/Placeholder service and application hosted on the same file server.
- Use of some unsupported third-party file managers can result in corruption of placeholders and potential data loss.

- c. Storage Central: Reporting will display the true size of the files contained on the file system; that is, 4 KB for each placeholder. File Blocking functionality is supported. Quota functionality in Storage Central is unsupported and must be disabled.
- d. Storage Exec 5.3 or earlier: Reporting will display the true size of the files contained on the file system; that is, 4 KB for each placeholder. File Blocking functionality is supported. Quota functionality in Storage Exec is unsupported and must be disabled.
- e. Storage Exec 5.5: Reporting will display the original size of the files contained on the file system. File Blocking functionality is supported. Quota functionality in Storage Exec is unsupported and must be disabled. However, quota functionality can be used on Storage Exec 5.5 with hotfix 5.
- f. See technical note 286168 at <http://entsupport.symantec.com/docs/286168>.
- g. If you restore FSA placeholders using Veritas NetBackup and the NetBackup option ‘If the destination file already exists then Overwrite existing files’ is selected, then the restore action will fail.
- h. Symantec and NetApp are aware of the limitation of single item restore and are jointly working towards a solution.

Enterprise Vault server and FSA Agent/Placeholder service component

It is possible to combine the optional Enterprise Vault FSA Agent/Placeholder service component with a different version of the Enterprise Vault server, as shown in the following table.

Note: Support is provided for backwards compatibility, but new features may not be available until the FSA Agent/Placeholder service version is aligned with the Enterprise Vault server version.

Enterprise Vault server version	Enterprise Vault FSA Agent/ Placeholder service component version
Enterprise Vault 6.0 SP3 or later service packs	Enterprise Vault 7.0 and service packs
Enterprise Vault 7.0 and service packs	Enterprise Vault 6.0 SP3 or later service packs Enterprise Vault 2007 and service packs

Enterprise Vault 8.0	Enterprise Vault 2007 SP4

OR = original release, SP = service pack, Y = supported, N = not supported, P = pending. See “Key” on page 8.

- a. To use the Enterprise Vault 2007 FSA Reporting feature, you must use compatible versions of the Enterprise Vault 2007 FSA Agent and Enterprise Vault Reporting. For details, see technical note 297390 at <http://entsupport.symantec.com/docs/297390>.

Domino mailbox archiving and journal archiving

Domino mailbox archiving

Domino mailbox archiving is supported on Enterprise Vault.

- c. For more information, see technical note 314678 at <http://entsupport.symantec.com/docs/314678>.
- d. Both 64-bit and 32-bit Domino Server are supported.

Enterprise Vault Domino Gateway

The following table shows support for Enterprise Vault with versions of Lotus Notes and Lotus Domino Server on an Enterprise Vault Domino Gateway. You will need at least a Domino Messaging server license for each Enterprise Vault Domino Gateway.

Note: In a production environment, the Enterprise Vault Domino Gateway should not be used as a general mail server. 64-bit Domino Server is not supported as a Domino gateway

Mandatory Lotus Domino hotfixes

You must obtain Lotus Notes client and Lotus Domino Server hotfixes from IBM. The Lotus Notes client hotfixes should be installed on every Enterprise Vault Server configured for Lotus Domino Archiving and every Enterprise Vault Domino Gateway server.

The Lotus Domino server hotfixes should be installed on every Enterprise Vault Domino Gateway server.

The Lotus Notes client hotfixes should be installed on the client from which you run `EVInstall.nsf`, if you do not run it on the Enterprise Vault Domino Gateway Server.

You do not need to apply the hotfixes to your target Domino mail servers or end user Lotus Notes clients.

If the Lotus Domino Server or Lotus Notes client version is 7.0.x please quote the following SPR references when you obtain the hotfixes. The same set of SPRs are required in both the client and server hotfixes:

RGAU746BTP
PCHE794T2M
RGAU74BDSJ
BGLN76WGKH
DANO677PPZ (fixed in 7.0.3)
ADEE725V5L (fixed in 7.0.3)

Compliance Accelerator and Discovery Accelerator

Compliance Accelerator

Note: You cannot upgrade from Compliance Accelerator 7.0 SP2 to the original release of Compliance Accelerator 2007. You can upgrade from Compliance Accelerator 7.0 SP2 to Compliance Accelerator 2007 SP1.

You can upgrade to Compliance Accelerator 8.0 from Compliance Accelerator 7.0 SP5 or 2007 SP4 only.

North America Daylight Saving Time

The North America Daylight Saving Time fix is described in the release documents for Compliance Accelerator 6.0 SP2 and 7.0 SP1.

If you are installing a Compliance Accelerator service pack to make use of the North America Daylight Saving Time fix, you also need to ensure that Enterprise Vault is updated to the required version, as shown in the following table.

Compliance Accelerator version	Enterprise Vault version required for DST fix
6.0 SP2	6.0 SP4 or later service pack
7.0 SP1 or later service pack	7.0 SP1 or later service pack

	10. <i>n</i>	Y	Y	Y	Y

- a. If you use Symantec AntiVirus you are recommended to make sure that you have Symantec AntiVirus 10.0 or later before installing the Enterprise Vault FSA Agent. See technical note 289487 at <http://entsupport.symantec.com/docs/289487>.
- b. See the section *Files are not archived or are recalled immediately* in the Enterprise Vault 2007 *ReadMeFirst*, which is available from <http://entsupport.symantec.com/docs/288394>.

For a list of recommended antivirus exclusions for Enterprise Vault, see technical note 284807 at <http://entsupport.symantec.com/docs/284807>.

Enterprise Vault placeholder shortcuts appear to the operating system as markers for offline files. Some antivirus programs can be configured to ignore offline files, but others cannot.

You can configure the antivirus products listed in the table above to ignore offline files. Other antivirus programs that have not been tested, but which can be configured to ignore offline files, will probably work with File System Archiving.

If you cannot configure your antivirus program to ignore offline files, every placeholder that it checks will result in an offline file being recalled. In this case, you can use the supplied `EVFSABackupmode.exe` program to place the file server into backup mode before scanning. See the Administration Console help for more information.

If you do not use placeholder shortcuts, any virus checker works.
